Commentary

IXP opens at 6667; 12 points above previous close. Expected resistance at 6696 targeting 6760 and support at 6640 and 6618. The price index reached the highest point at 6697 (above previous peak) and then closed at 6670; 14 points above previous close. liquidity ratio during the session was showing 75% buy but at the end of the day it showed 52% buy and 48% sell. Another positive session even though the value and quantity is less than yesterday's. Trading was volatile as the price index was moving in the range of 40 points. One negative point is that IXP closed below 6686 which means we are still in a downtrend unless it shows the opposite next week.
