Commentary

IXP opens at 6760; 6 points above previous close. The price index reached the lowest point at 6708 and closed at 6774 (66 points bounce); 20 points above previous close. Liquidity ratio at the end of the day shows 43% buy and 57% sell. Very weak session with the lowest value since Sep 2016 reaching only 4.3 million KD. Closing above the support level 6760 is positive specially that the index bounced 66 points from the lowest point yet this is must be accompanied with high trades. We stay at the same main support and resistance levels 6760-6820.
