Commentary

IXP opens at 6775; 1point above previous close. The price index reached the lowest point at 6736 and closed at 6776 (40 points bounce); 2 points above previous close. Liquidity ratio at the end of the day shows 47% buy and 53% sell. Another weak session with the lowest value since Oct 2016 reaching only 3.8 million KD. Closing above the support level 6760 is positive specially that the index bounced 40 points from the lowest point yet this is must be accompanied with high trades. We stay at the same main support and resistance levels 6760-6820.
