### Commentary

IXP opens at 6778; 2 points above previous close. The price index reached the lowest point at 6744 and closed at 6779; 3 points above previous close. Liquidity ratio at the end of the day shows 65% buy and 35% sell. Positive session with increase in value, volume, and trades. The share price of Al Madina rose by 20% after returning to trading, influenced by the share price in Dubai Financial Market (DFM). We are still closing above the support level 6760 but the closing is not "real" or efficient specially that few stocks made the last minute jump. We stay at the same main support and resistance levels 6760-6820.
