Commentary

IXP opens at 6795; 7 points above previous close. Expected resistance at 6804 and support at 6766. The index reached the resistance but failed to maintain that level and fell back to reach the lowest level at 6750 and then bounced to closed at 6808; 20 points above previous close. Liquidity ratio at the end of the day shows 46% buy and 54% sell. Should the index stays above the mentioned resistance it could lead to reach 6895 passing through minor resistances. Breaking the support might lead to 6740 and 6718. In general, we're still in a downtrend unless it changes in the coming sessions.
