### Commentary

IXP opens at 6811; 11 points above previous close. Expected resistance at 6816 and support at 6766. The index reached the highest at 6821 but failed to maintain that level and fell back to reach the lowest level at 6782 and closed at 6800; 8 points below previous close. Liquidity ratio at the end of the day shows 51% buy and 49% sell. It was very important in today's session to have an increase in both value and volume as this will assure the continuity of the positive performance that we have been witnessing in the last few sessions. Staying above 6816 is very positive leading to 6895 and 7091 (previous peak).
