Commentary

IXP opens at 6722; 3 points below previous close. Expected resistance at 6728 and 6752 targeting 6895, and support at 6696 and 6670. The market continued to rise with some stocks being under buying pressure after positive Q1 results. the price index reached the highest point 6744 at close 6732; 7 points above previous close. liquidity ratio at the end of the day shows 52% buy and 48% sell. Total value traded and quantity are yet good for another positive session with expectations to have a temporary rise. As long as we are still below 6895 nothing is confirmed and the downtrend is still possible. 6 more sessions before Ramadan might slowdown the market.
