KSE Price Index Movement

Commentary

IXP opens at 6860; 3 points below previous close. For most of the day trading was on a horizontal trend, yet buying pressure was present in few stocks which kept the index above the previous resistance 6838. The index reached its highest peak at 6879 passing the resistance at 6877 but failed to keep it at that level and fell back to reach lowest point at 6849 and closed at 6868; 11 points above previous close. The market needs more liquidity and to stay above 6838 for two consecutive days. Next resistance level is at 6877, managing to break this with high trades might lead the index to reach 6980 and then 7100. Current support levels are at 6810 and 6760.
