Commentary

IXP opens at 6744; 39 points below previous close. The index reached the highest at 6784 and the lowest at 6725 and closed at 6765; 18 points below previous close. Liquidity ratio at the end of the day shows 22% buy and 78% sell. The market might have affected negatively when it hasn't been mentioned in the MSCI Emerging Markets Watch List. In addition, some stocks are still affecting the price index and pushing it further down such as Eyas which has dropped 11% down from previous close. Very important to stay above 6760 as a solid support level, but failing to stay above this level might lead to reach 6695, 6670, and 6545.
