Commentary

IXP opens at 6820; 12 points below previous close. Expected resistance at 6868 and support at 6822/6804. The index reached the highest at 6861 and the lowest at 6819 and closed at 6845; 13 points above previous close. Liquidity ratio at the end of the day shows 50% buy and 50% sell. The focus today was on the cheaper stocks and that can be seen from the higher volume and lower value. Blue chips were in profit taking after 4 consecutive sessions. Now it is very important to stay above 6845 as 6822 became a support level. With high trades (above 150 million shares) we might reach 6895 and prepare hit 7091 (previous peak).
