Commentary

IXP opens at 6888; 3 points above previous close. Expected resistance at 6895 → 6912/6936 and support at 6885 → 6860/6853. The index reached the lowest at 6871 and the highest at 6920 and closed at 6914; 29 points above previous close. Liquidity ratio at the end of the day shows 44% buy. Unstable trading day with volatility being higher than previous days due to profit taking on selective stocks. What used to a resistance has become a support, and the market needs to have high trades to make it a solid support to help reaching previous peaks.
