Commentary

IXP opens at 6648; 1 point below previous close. Expected resistance at 6670 targeting 6695, and support at 6636 and 6545. The price index reached the highest point at 6683 and then closed at 6667; 13 points above previous close. liquidity ratio at the end of the day shows 54% buy and 46% sell. the new system has proven to be applied at the wrong time specially in Ramadan and the summer break. Would have best to start the new system when there high trades to measure the success of the new system, but as of now the new pricing system has failed to achieve the aimed goals.
