Commentary

IXP opens at 6799; 4 points above previous close. Expected resistance at 6804/6922 and support at 6760/6740. The index reached the lowest at 6768 and closed at 6851; 56 points above previous close. Liquidity ratio at the end of the day shows 27% buy and 72% sell. the selling pressure has increased on blue chips with both KFH and AUB showing 80% sell, Zain 86% sell, and NBK 97% sell. Although the price index closed high yet this happened with low value and volume so it might fall back to previous close. If the price index break reached and break the level 6868 with high value and volume we might have 6985 as next target.
