Commentary

IXP opens at 6804; 3 points above previous close. Volatility was high today as the price index went from the highest point at 6827 to the lowest at 6764 (63 pints range), and then closed at 6819; 18 points above previous close. Liquidity ratio at the end of the day shows 29% buy and 71% sell. Closing above 6820 is always positive but most importantly is to stay above it for a consecutive sessions. We still have 6895 as a critical level which will lead to reach the main target at 7000.
