### Commentary

IXP opens at 6624; 3 points below previous close. Expected resistance at 6640 and then 6680 and support at 6618 and then 6575 and 6534. The price index reached the lowest point at 6545 near the second support level and then bounced to reach the highest point at 6637 (previous peak) and then closed at 6598; 29 points below previous close. liquidity ratio at the end of the day shows 36% buy and 64% sell. The index is still in a downtrend by creating a new bottoms in every session. Reaching previous peak is not enough, the index needs to close above previous peaks to shift the downtrend to a uptrend. Support is still at 6575 or we will have a new bottoms.
